

(a) Same Python program

```
def f(xs):  
    sum_all = len(xs)  
    ww = sum_all + 3  
    qq = ww + 4  
    return qq  
f([5, 3])
```

Correct length: 2

Name suggests sum: 8

Correct final answer: 9

(b) Examples show values only

OLMo-2-7B writes:

sum_all = 8

ww = 11

qq = 15

**Final answer: 15
(wrong)**

(c) Examples show operation and value

OLMo-2-7B writes:

sum_all = len(xs) = 2

ww = sum_all + 3 = 5

qq = ww + 4 = 9

**Final answer: 9
(correct)**

Same program and model; only the worked examples' format changes.
